Best Business Models Investment Process

Nowadays, companies are facing three major issues: **Globalisation**, **Digitalisation** and **Regulation**.

Companies are no longer developing at a constant pace. Therefore, it is necessary to:

Analyse the lifecycle of the companies Business Models

Look for attractive pairs of share price upside/downside risk

Our investment philosophy, integrating ESG criteria, aims to assess a company's upside potential as a function of its positioning in its lifecycle and to benefit from upward or downward trends in market stock's valuation.

Investment universe

The fund invests predominantly in Eurozone large and mid caps.

Risk / Return Profile

Risk associated with discretionary investment management • Risk of loss of capital • Equity risk • Small caps risk • Emerging equities risk • Derivatives market risk • Interest rate risk • Credit risk • Default risk • Foreign exchange market risk • Liquidity risk.

BEFORE ANY INVESTMENT, PLEASE CAREFULLY READ THE KIID AND PROSPECTUS OF THE UCIT
Performance refer to the RD SHARE CLASS - See full disclaimer overleaf

Portfolio

During a turbulent October, markets were dominated by risk aversion fuelled by fears of a slowdown in the economic cycle and further geopolitical tensions. The least cyclical companies held in the portfolio fared better in relative terms. As such, Mature Growth and Transition Business Models, which are the least risky, outperformed the riskiest categories such as Rapid Growth and Recovery.

Fund allocation to less-risky BMs was beneficial. The most defensive Mature Growth BMs, such as Total and Sanofi, proved relatively more resilient notably thanks to satisfactory quarterly results. Certain Transition BMs such as Arkema and ABN Amro were negatively impacted by fears of an economic slowdown, while others including Voestalpine and Fresenius SE were hit by profit warnings. Rapid Growth BMs were neglected by investors for the same reasons, led by tech stocks such as Infineon, SAP and ASML. Lastly, our cautious allocation among Recovery BMs contributed positively, as a number of stocks within this category, such as Elis and Unicredit, were weighed down by their cyclical profile.

During the month, we increased our weightings in Chemicals stocks, the Automotive sector and Telecoms, while reducing exposure to Industrials, Personal Goods and the Retail sector.

Investment approach

The objective of the fund is to achieve annualised capital appreciation in the long term through a risk adjusted outperformance against the benchmark. The stocks are picked on an active, fundamental, bottom up, discretionary and unconstrained approach. The recommended minimum investment horizon is five years.

Investment Universe

The fund will invest its assets in equity and equity related securities issued by companies that are headquartered in the European Union, or conduct the preponderant part of their activity in the European Union.
